Waxing/Sugaring Contraindication List

To ensure a successful waxing/sugaring experience, please sign that you have read and will follow these instructions.

WARNING:

If you are currently using any of the following prescription medications, you cannot receive a waxing/sugaring service. You must discontinue use of these medications for a minimum of three (3) months prior to waxing/sugaring. The exception is ACCUTANE; you must be off of this medication for at least 1 year.

- Accutane (acne medication)
- Adapalene (acne medication)
- Alusta (Retin A)
- Avage (Tazorac - acne medication)
- Avita (Retin A)
- Differin (acne medication)
- Isotretinoin (See Accutane)
- Renova (See Retin A)
- Retin A (acne and anti-aging medication)
- Tazarac (acne medication)
- Tazarotene (see Tazorac)
- Tretinoin (See Retin A)

Caution:

If you are currently using any of the following, please inform your Esthetician. These products can make the skin more sensitive. Thin, sensitive skin is more vulnerable to lifting and sensitivity during waxing/sugaring.

- Other acne medications not listed above
- Alpha Hydroxy Acids (Glycolic/Lactic)
- Oral Antibiotics
- Topical Antibiotics
- Retinol
- Salicylic Acids
- Exfoliants

Precautions & Considerations: Please read valuable guidelines

- You MUST wait at least 7 days before waxing/sugaring after a light chemical peel or microdermabrasion
- Waxing/sugaring cannot be performed if you have had laser skin resurfacing within the past year
- Waxing/sugaring cannot be performed if you have had a physician administered peel within the past 2 years
- Women may experience extra sensitivity to waxing/sugaring up to a week prior to the beginning of their period.
- Sunburned or irritated areas cannot be waxed/sugared
- Moles cannot be waxed

"Ideal" after wax care:

- No sun for 12 hours following any waxing/sugaring treatment
- No hot baths for 24 hours following any body waxing/sugaring treatment
- No abrasive scrubs for 24 hours following a waxing/sugaring treatment
- If irritation should occur, it is recommended you use an antibiotic ointment such as Neosporin to keep the area continually moist to avoid infection and scabbing
